

## Prehistoric life in Ireland

We went to An Creagan on Tuesday 7<sup>TH</sup> March 2017 and our guide Peter showed us a power point of the Celts, we learned about the different ages and we learned a wee bit about the weather. Now I will tell you about the ages and the weather. The Celts came from Europe like places like France. The first age was the Ice Age, rivers were frozen and the Ice was as thick as a mile. The next one was when the animals moved in. Then it was the Stone Age, they used strong tools. Next was the Bronze Age, the Bronze tools were way stronger, and the Bronze bracelets were very expensive you had to be really wealthy. Iron was after Bronze, Iron was an everyday tool, you didn't have to be wealthy. Gold was next, you had to be really wealthy to afford the Gold bracelets or torcs. The weather was cold and warm but the Celts kept on hunting. Now after the Gold Age was

nowadays our technology is computers or cars. Peter explained that the future has things still to come. Now I am going to talk about the activities, number 1 you had to make your own metal bracelet. Number 2 making the Celtic house using wattle and daub Number 3 was turning wheat seeds into flour. Number 4 was the rope making, we used a sally rod to make it. Number 5 was the archery my friend Matthew hit it once and my other friend Harry hit it twice. Finally Number 6 was the Rock Art we drew a kind of grave stone but we did no writing a I hadn't been invented. The wattle and daub was really mucky and we had our lunch after. To finish off we did some pottery it was really fun! I give An Creagan a five star it was really fun!
